AI Driverless Cars

We are designing driveless cars

→ Do they always avoid pedestrians immediately?

Yes → Children now jump in front of your cars for fun → Children jump in front of human cars too by mistake and are killed

No → Some children are killed

Is this the fault of AI?

No → Adverts telling children not to jump in the road → Angry drivers start to cut up driverless cars. Crashes occur.

→ Law is passed requiring AI oversight of all human driven cars

→ Humans stop concentrating when driving as they know AI will keep them safe

→ What do we lobby for?

→ Insist on human oversight

→ This a good thing - AI will keep everyone safe

Yes → Law is passed dictating human oversight for all AI driven cars

→ Uber drivers complain this just offshores the job they were doing fine in the first place

→ Investigation shows that the offshored human oversight is in fact an AI bot

→ You sell your AI software to those offshored companies

→ All cars are driven by AI. There are zero crashes and your software is a huge success!
